Joaquín Núñez Vega

Software Engineer · Full Stack Developer

joaquin.software.e@gmail.com | linkedin.com/in/joaquin-n6 | github.com/joaquinn6

Summary

Software Engineer with 7 years of experience in full stack development with Python, JavaScript and Vue.js. I design microservices and REST APIs with FastAPI and Node.js, build web applications and micro-frontends with Vue 3 and Vite, and integrate platforms such as Shopify, Google Maps and Azure. I have led projects with other developers under my supervision, and I introduced an AI-assisted development workflow to the team that cut the setup time for new projects from 1 to 2 months down to 2 weeks at most.

Skills

- **Programming languages:** Python, JavaScript, SQL
- **Backend:** FastAPI, Node.js, REST APIs, microservices, Jinja2
- **Frontend:** Vue.js 3, Pinia, Vite, micro-frontends (Module Federation), React, HTML, CSS, Bootstrap
- **Databases:** PostgreSQL, MongoDB, SQL Server
- **DevOps and cloud:** Docker, Kubernetes, Azure Blob Storage, Bitbucket Pipelines, GitHub Actions
- **Testing:** Pytest, Vitest
- **AI-assisted development:** Claude Code, Codex, Cursor, MCP servers (Chrome DevTools MCP)
- **Tools:** Git, GitHub, Bitbucket, Jira, npm
- **Languages:** Spanish (native), English (conversational)

Experience

Hotaka iKhodi · Full Stack Developer

September 2020 – October 2026

- Led projects with 1 to 2 developers under my supervision: assigned tasks, provided technical guidance and reviewed every pull request to ensure code quality and that it met the requirements.
- Designed, built and maintained microservices and REST APIs with Python (FastAPI) and Node.js, including data modeling of MongoDB collections and PostgreSQL tables for efficient storage and querying.
- Built a shipping returns portal embedded in Shopify through an iframe, with communication between the app and the store via postMessage.
- Implemented a micro-frontend architecture with Vue 3, Vite and Module Federation: a container app and two independent micro-frontends, each with its own Pinia store.
- Created, published and maintained npm packages of UI components, both private packages for the company and my own Vue 3 component library, with semantic versioning, changelogs and pipeline-based publishing. They made it possible to build new screens by reusing components instead of writing them from scratch.
- Introduced AI-assisted development to the team with Claude Code and Codex, based on requirements written in Markdown and AGENTS.md files that keep the project architecture consistent. Together with the component library, this cut the time to set up new projects from 1 to 2 months down to 2 weeks at most.
- Built responsive Vue.js web applications to view, create, edit and delete data.
- Integrated external services such as Google Maps, messaging APIs and Azure Blob Storage for file upload and download.
- Created HTML templates with Jinja2 and CSS Flexbox for invoices, shipping labels and emails.
- Worked with Docker containers, ran tasks in Kubernetes pods, ran Bitbucket pipelines and wrote automated tests with Pytest and Vitest.

Technologies: Python, FastAPI, Node.js, Vue.js 3, Pinia, Vite, React, MongoDB, PostgreSQL, Docker, Kubernetes, Azure, Shopify, Git, Bitbucket, Jira

COMASA · Junior Developer

September 2019 – September 2020

- Designed and implemented SQL Server tables, triggers and views to ensure data integrity and efficient querying.
- Built Visual Basic desktop applications for product quality control that sped up inspection processes and reduced errors.
- Trained staff on the quality control system I developed.

Technologies: SQL Server, Visual Basic

Education

B.S. in Information Systems Engineering · National Autonomous University of Nicaragua, León (UNAN-León)

2018 – 2023 · Graduated
